SUMMARY

Computer Science student (May 2027) designing full-stack applications and data pipelines that automate business workflows. Skilled in JavaScript, Python, Kafka, SQL, and Docker, with projects spanning event-driven services and AWS deployment.

EDUCATION

Northeastern University	Boston, MA
Candidate for Bachelor of Science Degree in Computer Science	Expected Graduation: May 2027

SKILLS

Languages: Python | TypeScript | JavaScript | Java | C# | C++ | SQL

Frameworks & Tools: React | Vue | Node | REST APIs | Prisma | Spring Boot | Docker | Kafka | Git | Figma

Cloud & Practices: AWS (EC2, S3, ECR, RDS) | Microservices | CI/CD | Systems | Agile

PROFESSIONAL EXPERIENCE

SoonForward New York, NY	May 2026 – Present
<i>Software Engineer Co-Op</i>	

- Built a customizable rates configuration system using Python, Vue.js, and REST APIs, replacing manual rate tracking and reducing rate-update time by 70%.
- Engineered an end-to-end invoice-to-shipment processing pipeline, translating existing business workflows into software and reducing shipment creation time by over 50%.
- Developed and integrated backend APIs supporting business workflows and data processing across the application.
- Collaborated with the development team to translate business requirements into maintainable software solutions.

PROJECTS

ImageHub Next.js, React, Java, C#, Spring Boot, .NET, Kafka, Docker GitHub	Sep 2025
---	----------

- Architected a .NET/SQLite monolith and event-driven Java (Spring Boot) services with a separate thumbnail microservice communicating over Apache Kafka.
- Created Kafka consumers with retries and a dead-letter topic so undecodable images never block the queue.
- Generated WebP thumbnails that cut image size by over 90%.

Social Networking App React, Python, FastAPI, Sqlite, Docker, AWS (S3, RDS) GitHub	Dec 2025
---	----------

- Constructed a full-stack social network with FastAPI, SQLAlchemy, and Next.js/TypeScript, implementing authentication, user profiles, friendships, feeds, comments, and real-time interactions.
- Containerized with Docker and deployed to AWS EC2 with a MySQL RDS database, using SQLite for local development.
- Built a responsive cross-platform UI with centralized state management, enabling consistent data synchronization.

Code Tester TypeScript, Python, Docker GitHub	Sep 2026
--	----------

- Engineered a cross-platform Electron application for running and debugging JavaScript, Python, and C++ tests.
- Features an end-to-end workflow spanning repository import, environment configuration, containerized test execution, and live test-result monitoring.
- Automated generation of Docker Compose multi-service environments from repository analysis, including detection and wiring of common service dependencies.
